SUMMARY

Final-year B.Tech CSE student (2027) focused on backend engineering. Built REST APIs and databases for a logistics platform and a university system serving 200 students a year, and merged 20+ patches into MediaWiki, a large open-source PHP codebase. Seeking a Backend / Software Engineer role.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, PHP, SQL
- **Backend:** Node.js, Express, FastAPI, REST APIs, Caching
- **Databases:** MongoDB, PostgreSQL, MySQL, Firebase
- **Frontend:** React.js, Next.js, Tailwind CSS
- **Tools:** Git, GitHub, Gerrit, Phabricator, Cloudinary, n8n
- **Fundamentals:** Data Structures & Algorithms, OOP, DBMS, Computer Networks, SDLC

EXPERIENCE

Full Stack Developer Intern, Vetro GlobalEdge LLP — Remote
Link2Logistics: logistics management platform [Live Site] — Feb 2026 – May 2026

- Built the admin dashboard and backend APIs (Node.js, Express, MongoDB) giving warehouse owners and merchants real-time inventory visibility.
- Reduced data retrieval latency by 20% by adding optimized caching.
- Streamlined merchant–supplier coordination and inventory logging.
- **Tech:** React, Next.js, Node.js, Express, MongoDB, Firebase, Tailwind CSS, Cloudinary

Open Source Contributor, Wikimedia Foundation — Remote
MediaWiki Core & extensions [Phabricator] [Gerrit] — Sep 2025 – Present

- Submitted 45 patches in one year, with 20+ merged into MediaWiki Core and 10+ extensions, including CampaignEvents, CheckUser, MassMessage, UploadWizard, Translate and ContentTranslation.
- Wrote PHP and JavaScript changes and iterated through code review with maintainers.
- Tracked and triaged issues on Phabricator.

PROJECTS

UIT-MAP: Virtual Project Tracker [Live Site]

- Built and maintain the backend of an institution-approved web app that digitizes the final-year project diary, used by about 200 students every year.
- Developed a Rubric Management module that cut manual evaluation time by 40% for administrators.
- **Tech:** PHP, SQL, HTML, CSS, JavaScript, Git

Brain Tumor Detection & Localization (Major Project) [GitHub]

- Built a FastAPI backend serving MRI classification and segmentation to a Next.js frontend.
- Trained an EfficientNet-B3 classifier reaching accuracy; added Grad-CAM heatmaps for explainable tumor localization.
- **Tech:** Python, FastAPI, TensorFlow, OpenCV, Next.js, MongoDB

EDUCATION

United Institute of Technology, Prayagraj — 2023 – 2027
B.Tech, Computer Science & Engineering — Percentage: 72.02%

LEADERSHIP & ACHIEVEMENTS

- **Technical Lead, WikiClub Tech-UIT** (Aug 2025 – Present): Founded the club, trained and mentored 50+ students on open-source contribution, and built its community platform with a contribution leaderboard.
- **Core Team Member, GDG & TFUG Prayagraj** (Jun 2026 – Present): Help organize technical workshops and boot camps.
- **Volunteer, Wiki Conference India 2026** (Kochi), selected through application.
- **Top 7**, 6th Technovation Hackathon, Sharda University; **Top 10 Finalist**, State Level Hackathon, United University.
